
```
% Robust Control Toolbox 2.0.7
% for use with MATLAB 6.0 and Control System Toolbox 5.0
% or later.
%
% Installation: Delete current toolbox/robust directory and
%               replace with these updated files.
%
% New features:
%   Robust Control Toolbox functions now recognize
%   the following system representations:
%       1) MKSYS (Robust Control Toolbox)
%       2) LTI (Control Toolbox SS, TF, ZPK)
%       3) PCK (MuTools Toolbox)
%       4) LTISYS (LMI Toolbox)
%   LTI is now the preferred form for system
%   representation. Functions with LTI inputs
%   return systems in LTI form.
%
% New functions:
%   RCT2LTI converts MKSYS, PCK and LTISYS
%   systems to Control Toolbox LTI objects.
%
%
% Notice:   These files may not be compatible with earlier
%           versions of MATLAB and Control System Toolbox
